SIMPLE AND SWEET

INTRODUCTION:

- The main idea of this project is to build a website for the company displaying it different area of work in simplest yet attractive way possible.
- From this people visiting website will come to know about company's unique area of expertise and what should they expect from the company.

EXPECTED LIST OF FEATURES:

- Here is the is list of features that our website will support:
  1. Brief description about website.
  2. Contact information.
  3. Photos of the company office and production line production line.
  4. Overall theme of the company.
- This features are the basic information that is required.

MARKET SURVEY:

- Almost every website has this features but we will present this information in efficient way. So that our website not only looks good but also have a good user friendly UI.
- For example this website of tata motors, they have good information displayed on their website but there is too much of extra information that normal user do not required
- And there is another website of reliance industries the have good and small amount of information shown on their website but it is not most good looking one.
